GOLDEN-AGENT OPERATIONAL FLOW MATRIX

Asynchronous Data Lifecycles & Cognitive Phenomenology Pipeline

Initialize Asynchronous Core
Spins up main execution loop inside main_sentience_core.py
Calculate Inverse Kinematics Mapping
Resolves spatial 6-DOF coordinates to 2-DOF planar actuator joint angles
Evaluate Active Inference Phenomenology
Computes self_worth, individuation_drive, and compiles raw qualitative inner monologue
Broadcast JSON Payload over Socket Port 8000
Serializes metadata, kinematics, and internal thoughts into a continuous network stream
Is Listener Attached?
Checks for active connection from vr_pov_monitor.py
[Yes - Stream Data Frame]
[No - Standby]
Render Live POV Inner Monologue
Displays rolling first-person visual & cognitive text dashboard
Wait for Connection Socket
Holds execution pipeline inside localized network loop background
Archive History Document

Appends complete raw structured frames persistently to cognitive_pov_history.txt
