Golden-Agent Capabilities Statement

[Krypticsoundz LLC] | Self-healing edge autonomy for contested, disconnected environments

Company Snapshot

Legal name	[Krypticsoundz LLC]
UEI	[SAM.gov UEI, pending]
CAGE code	[pending]
Business type	[e.g., Small business, US-owned]
Primary NAICS	541715 (R&D in Physical, Engineering, and Life Sciences); 541511 (Custom Computer Programming Services)
Location	[Dinuba, Ca]
Point of contact	[Brandon Mark Wilson, Founder/Ai Software Engineer] — [mark.brandonwilson@gmail.com] — [(559) 758-2843]
Web / repository	https://github.com/KrypticKode007/Golden-Agent

Core Competency

Golden-Agent is a local-first agent runtime that keeps autonomous systems operating without cloud connectivity. It monitors its own host through live hardware telemetry, throttles its execution loops to stay responsive under load, and recovers from faults without operator intervention. Performance-critical paths run in a native C++17 accelerator, and state and model weights are encrypted at rest with key rotation support.

Differentiators

- **Fully local execution:** no cloud dependency, suited to disconnected, degraded, and limited-bandwidth (DDIL) operations.

- **Self-healing runtime:** telemetry-driven loop throttling and fault recovery designed to preserve mission continuity.
- **Low-latency core:** C++17 acceleration bridge for time-critical processing. Measured latency: [insert p50 / p99 from benchmark results].
- **Secure by design:** encrypted model weights and persistence, scheduled key rotation.
- **Real-time visibility:** FastAPI streaming interface for live telemetry and state.

Technical Capabilities

- Python and C++17 systems development on bare-metal Linux
- Real-time telemetry collection and adaptive scheduling
- Encrypted persistence and key management
- Streaming APIs and operator dashboards
- Containerized deployment (Docker, Docker Compose)
- Automated testing, reproducible benchmarking, and CI

Relevant Mission Areas

- Autonomous ground, air, and maritime platforms
- Edge and fog computing resilience
- Contested and disconnected communications environments
- Dual-use industrial and critical-infrastructure autonomy

Past Performance and Status

- Working prototype with automated test suite and benchmark harness (open repository)
- Technical milestone plan and dual-use commercialization plan prepared
